

1           **ABSTRACT OF THE DISCLOSURE**

2           The efficient and intuitive presentation, navigation, and selection of available  
3           AV information in a graphical user interface (GUI) that is displayed on a display  
4           apparatus of an AV system and controlled through user manipulation of a scrolling  
5           mechanism of a navigation and selection device of the AV system. Related AV  
6           information is organized as items within lists that correspond to various navigable  
7           fields of a status bar of the GUI during the GUI interactive mode. A highlighted  
8           navigable field of the status bar displays its list of related AV information and the  
9           items of the list are scrolled through the navigable field by a user causing the  
10          scrolling mechanism to move in a scroll. A different field of the status bar may be  
11          selected by the user moving the scrolling mechanism in a lateral movement.  
12          Activation of the selection mechanism of the navigation and selection device will  
13          cause an AV device of the system to be controlled in accordance with the AV  
14          options displayed within the status bar fields at the time the selection mechanism is  
15          activated.
